

Feasibility Report

Feature & Technologies

Confident:

- Branching dialogue system → w/ HTML, CSS, JavaScript
- Scene Illustration → Procreate
- Tagalog Vocab reveal → CSS, JS
- Click-to-advance → CSS transitions and JS events

Learnable:

- Typed text effect for dialogue → [Typed.js](#)
- Branching story for scripting → [Ink.js](#)
-

Difficulties & challenges

Drawing the context:

I'm planning on drawing the grandma, who will be speaking to you, and the background imagery. I feel like this would take a while, as usually the context itself takes me the longest to do.

Balancing emotion with usability:

For this project, I do want to enable this emotion of not being able to understand a language, without wanting to make the user disengage from my project. It's more of figuring out how to pace everything, which I feel that user testing will help me with.

Scope risk:

With this project, there is an opportunity to expand it as I build it. Given the time constraints, it's not feasible to add any more ideas. There must be priority with the features that I already have planned out, and I shouldn't get ahead of myself.
